

BUSINESS PLAN / FY 2026–27 / INTERNAL

KEYSTROKE

Let us push the buttons for you.

PREPARED

18 September 2026

PRINCIPALS

Kieran / Tyler

STATUS

Pre-launch. No trading.

VERSION

1.0

00 THE PLAN IN ONE NUMBER

75,000

YEAR ONE REVENUE FLOOR, IN DOLLARS. A PLAN FIGURE,
NOT A COUNT.

Two principals take the manual admin out of Australian businesses of 5–50 staff and rebuild it so it runs itself. A crew of software agents runs the scheduled work overnight. We count the inputs a person no longer has to make, and we publish the method.

\$75,000

YEAR ONE REVENUE FLOOR

\$55,000

YEAR ONE PROFIT BEFORE TAX

\$7,500

MONTHLY RECURRING AT MONTH 12

\$12,000

CASH REQUIRED BEFORE REVENUE

\$75,000 is a floor, not a forecast. It uses about a fifth of the capacity two full-time people have. Capacity exists for \$200,000 and above. The constraint on year one is distribution, not delivery, and the plan is written that way throughout.

01 POSITIONING

WHAT WE ARE

A firm that rebuilds the parts of a business that run on manual effort, and then makes the business look like what it has become. Two principals do the work. A crew of software agents carries the volume. Four practices: data and reporting, scheduled work, software and web, brand and design.

WHO WE SERVE

Australian businesses of 5–50 staff. Past the startup stage and into the stage where the admin has quietly become the job. Spreadsheets held together by one person's memory. Reporting that arrives too late to act on. Three systems that do not speak to each other.

The buyer holds authority: the owner, the operations manager, or the finance manager. They know it is costing them and they do not know who to trust to fix it.

THE PROBLEM, STATED NARROWLY

Manual administrative load, and the absence of information a business can act on in time. Not modernisation in the abstract. Work a person does by hand every week, and numbers the business cannot see until it is too late to use them.

WHY US AND NOT THE ALTERNATIVES

CONSULTANCIES

Charge heavily, deliver a document, leave. The client is left holding a recommendation nobody built.

OFFSHORE PROVIDERS

Cheap until you count what they do not understand about how this particular business runs. The rework is the cost.

SOFTWARE VENDORS

Sell a platform that assumes a business shaped differently. Unused inside six months, still on the card.

KEYSTROKE

Built for the business as it is. Priced in the open. Delivered by the two people who designed it.

HOW WE WORK

- Fixed price at the front door. The audit is \$1,500, published, and includes an initial tool.
- Larger work quoted on the hours it takes, with indicative ranges shown so nobody is guessing.
- Proof before claims. The site shows what was built and what it did, not adjectives about what we could do.
- Agents are in the delivery, not in the marketing. A client can watch one run.

WHAT WE DELIBERATELY DO NOT DO

We do not refuse categories of work. We refuse ways of working. No offshore delivery. No handing a client to a junior. No retainer that bills for attendance instead of output. No number quoted before it has been thought through. No job scoped that cannot be staffed in the week it is due.

NEVER MISTAKEN FOR

A marketing agency. A firm that sells the idea of machine intelligence rather than the working thing. A freelancer with a good website.

02 BRAND

A keystroke is one deliberate input a person makes that the rebuilt system no longer requires. It is a unit. Units can be counted, and a counted thing going down is the whole brand.

NAME

Keystroke. Settled.

LINE

Let us push the buttons for you. Sentence case, full stop kept.

VOICE

Flat, precise, faintly amused by waste. Numbers instead of adjectives. No enthusiasm and no reassurance. The work is the reassurance.

PALETTE

Instrument. Graphite, cold steel, and two states. An instrument is dark so the readout is the only lit thing on it. No hue anywhere except two facts: the crew is running, and a number is being removed.

TYPE

Knockout for display, Söhne for text, Söhne Mono for every figure. Open fallbacks in place until the licences are bought.

THE CREW

A set of software agents that runs overnight on scheduled work: reconciliation, reporting, intake, drafting, checking. Each is rostered to a function. The roster page shows what each one runs, when it runs, and its running total.

Every crew surface carries the line **Not a person.** at the same weight as the other fields. No human names, no portraits, no implied headcount, no pronoun other than it. This is not a disclaimer. It is the reason the page is worth having.

WHY THIS MATTERS COMMERCIALY AND LEGALLY

Presented as agents, the roster is a product demonstration and carries no exposure. Presented as staff, with human names or photorealistic faces, it is misleading conduct under section 18 of the Australian Consumer Law, and it would collapse the trust position the rest of the brand is built on. The line is drawn and it does not move.

THE COUNTING METHOD

A brand built on a number is only as good as the count. The method is published. A baseline is recorded once with the client watching, counted from the recording rather than estimated, and multiplied by the client's own system records. Nothing accrues until the rebuilt process has run in production for four consecutive weeks with no manual fallback. There is no partial credit, no house average, and no rounding up.

No figure appears on any surface unless it traces to a row in the ledger. That constraint is the reason the counter can be the largest thing on the page.

03 SERVICE ARCHITECTURE

One front door, four practices, one recurring layer. The job of this structure is to make a long list of capabilities read as a firm.

THE FRONT DOOR: THE KEYSTROKE AUDIT

One fixed-price product. Every relationship starts here. We take one process end to end and count what a person physically does: characters typed, clicks, copies and pastes, attachments, re-entries. We return the annual figure, what it costs in hours, and what it would be after a rebuild.

\$1,500

FIXED PRICE

1–2

WEEKS TO DELIVER

1

PROCESS, DEFINED IN WRITING

1

INITIAL TOOL INCLUDED

The deliverable is a shift report: the count, the cost in hours, a ranked list of what to fix, and a scoped quote for the first build. It is cheap enough to decide on without a meeting, it hands the client a figure nobody has given them before, and it converts by ending with a priced build in front of them.

This is also how the fixed-price promise and hours-based quoting coexist without either being dishonest. The audit is fixed. What follows is quoted on hours, and the audit's own numbers make the case for it.

THE FOUR PRACTICES

PRACTICE 01

COUNT

Data and reporting. API pipelines, Power BI, Excel systems built to hold, financial reporting packs, job costing, project analytics, timesheets, daily and monthly reporting.

Sells: the business can finally see itself in time to act.

PRACTICE 02

CLEAR

Scheduled work and the crew. Power Automate, SharePoint, document generation, approvals and routing, integration between systems that do not talk, and the agents that run it all overnight.

Sells: the work happens without anyone doing it.

PRACTICE 03

BUILD

Software and web. Custom applications, invoicing and time tracking, client-managed WordPress, sites deployed on Cloudflare, e-commerce, front end and back end, dashboards, widgets.

Sells: a tool built for how this business actually runs.

PRACTICE 04

FACE

Brand and design. Identity and rebrands, tender and EOI material, messaging, audience research, stationery, collateral, content.

Sells: the business looks like what it has become.

WHERE PRACTICE 04 SITS, HONESTLY

Design is not effort removed, so it does not belong in the counting metaphor and should not be forced into it. Its place is sequential. Practices 01 to 03 clear the desk. Practice 04 builds what goes on it. On the site, design reads as the consequence of the rebuild rather than a service bolted to the side, which is also what sells it to a client who arrived for reporting.

THE RECURRING LAYER: KEYSTROKE SAVERS

The agents keep running and somebody watches them. Monitoring and repair of everything we built, the monthly reporting pack produced and checked, a block of change hours, and a scheduled review. Support covers what we built. That boundary is what stops it becoming a helpdesk.

KEYSTROKE SAVERS – LAUNCH PRICING

TIER	HOURS / MONTH	RESPONSE	MONTHLY	EFFECTIVE RATE
Watch	10	1 business day	\$1,500	\$150
Run	20	1 business day	\$3,000	\$150
Own	35	1 business day	\$5,250	\$150

Response time is one business day on every tier. The tiers differentiate on hours alone. No published client cap.

COMMERCIAL FLAG – MARGIN ON THE WATCH TIER

Ten hours at an effective \$150 consumes the entire fee. Monitoring, the reporting pack and the review sit outside those hours and are unfunded. On a month where something breaks, the tier delivers fourteen hours for the price of ten.

Margin on the Watch tier as priced: \$0

Comparable Australian retainers at this hour count sit between \$2,200 and \$2,800. The recommendation is to launch at \$1,500 deliberately, name it foundation pricing on the site, and reprice new clients once six are held. At the year

one volume in this plan, six clients is not reached until around month ten, so repricing becomes a year two decision and the awkward conversation disappears.

THE BUYING SEQUENCE

Audit at \$1,500, then a build quoted on hours, then Keystroke Savers monthly, then expansion into the other practices. Every client should touch at least two practices inside twelve months.

Three price points are published: the audit, indicative build ranges by practice, and the retainer tiers. Everything else is quoted. That is the whole of the transparency promise, and it does not require pretending custom work can be bought off a shelf.

04 THE WEBSITE

Eight sections, one scroll. No mega-menu and no dropdown of twenty capabilities. The case showcase is the site. Everything else supports it.

Homepage Spine

#	Section	Carries
1	Hero	The line, the counter, one sentence of what we do
2	The count	Three or four figures from real work, each traced to the ledger
3	The cases	The scrolling showcase. The reason the site exists
4	The audit	\$1,500, what is in it, what happens next. One button
5	Practices	Four blocks, each to its own page
6	The crew	The agent roster, with running totals
7	Keystroke Savers	Three tiers, priced
8	The two of us	Named principals, stated plainly as the whole firm

A CASE AS A UNIT OF CONTENT

Every showcase item is the same object. Consistency is what makes twelve of them read as a back catalogue rather than a scrapbook.

THE BUSINESS, DESCRIBED NOT NAMED

A 22-person mechanical contractor. No logos and no client names until permission exists.

THE BEFORE, AS A COUNT

Monthly job-cost reporting: 41,900 keystrokes a year. Four days late, every month.

WHAT WAS WRONG

One sentence of plain language. No category vocabulary.

WHAT WE BUILT

Two or three lines naming the actual tools. Specificity is the proof.

THE AFTER, AS A COUNT

400 keystrokes. Reporting lands at 06:00 on the 1st.

ARTEFACT

A screenshot, a short loop of the thing running, or a live embedded demo. Anonymised.

PRACTICE TAG AND CREW UNIT

Which practice it belongs to, and which agent runs it now.

WHAT IT COST, AS A RANGE

Builds like this: \$6,000–\$9,000. The field most firms will not publish.

HOW THE SCROLL BEHAVES

Each case occupies roughly one viewport. Narrative and counts on the left, artefact on the right. Scrolling into a case rolls the before figure down to the after figure, in 180ms, linear, because a mechanism does not ease. That is the site's only real motion and it is the brand idea animated: you scroll, the waste disappears.

A sticky filter bar carries two rows, by practice and by business type. Filtering reorders rather than empties. Nothing is hidden by default.

HOW A VISITOR RECOGNISES THEMSELVES

- **Business type filter.** They pick their own kind of business and the showcase reorders.
- **The symptom as the headline.** Not "Power BI implementation". Instead: the invoices get typed twice. Nobody knows what a job made until it is finished. Month-end takes four days. People recognise themselves in the complaint.
- **The quiz, placed inside the showcase.** Not sure which of these is you? Nine questions. The result returns them to a filtered showcase.

Launch needs eight to twelve cases. Existing owned work covers most of them. The gap is practice 04, where the unit is not a keystroke: a tender document, 60 pages, rebuilt in four days, won. Anything that cannot be shown anonymised becomes a capability card instead, labelled honestly as a demonstration build. Two or three of those is fine. More and the page starts to feel theoretical.

05 THE QUIZ

Nine questions. Ninety seconds. No sales call unless they ask for one. It is a diagnostic, and it has to behave like one or the trust position goes with it.

One question per screen, tappable answers only, no typing. A progress marker that starts at 1 of 9 so the length is never a surprise. Every question answerable by somebody who does not know what an API is. No email gate to see the result.

QUESTION LOGIC

#	QUESTION	WHAT IT DETERMINES
1	What kind of business?	Which cases they see at the end
2	How many people?	Sizing. Flags anyone too small for the audit to repay
3	Which of these happens every week? (multi)	The core diagnostic. Each option maps to a practice and to specific cases
4	How long does month-end take?	Best single predictor of practice 01 work
5	Can you see what a job made while it is running?	Separates reporting work from job costing
6	How many systems do not talk to each other?	Integration scope
7	When did you last update how the business looks?	The only route into practice 04. Asked without judgement
8	If you got fifteen hours a month back, where would it go?	Motivation. Changes the language, not the content
9	What is stopping you fixing this today?	Shapes the closing paragraph

WHAT THE INTERPRETER RETURNS

- **The read.** Two or three sentences naming their problem back to them using their own answers as evidence. Five systems that do not talk, a four-day month-end, no visibility on job margin. That is not five problems. It is one problem showing up in five places.
- **An indicative figure, labelled as an estimate.** Businesses this size with these symptoms typically lose 80 to 120 hours a year to re-entry alone. We would have to count theirs to be sure. The admission is what makes the number credible.
- **Two or three recommended items** drawn only from the real product list, each linked to a matching case, with published ranges. Never more than three. Six reads as a menu, which is what they came here to avoid.
- **The order to do them in.** Start with the reporting. The rest is cheaper once it exists. No competitor's quiz does this, and it is the clearest demonstration of judgement on the site.
- **Their objection, answered** using question nine.

GUARDRAILS ON THE INTERPRETER

It recommends only from the fixed product list and invents nothing. It never states a firm price for custom work, only published ranges. It does not diagnose beyond what the answers support. If the answers show a business too small or too simple to benefit, it says so and recommends they buy nothing yet. That last rule costs a handful of leads and buys more credibility than any case on the site.

THE HANDOFF — THE PRIMARY TARGET

Three exits are offered together with no pressure hierarchy: email me this, ask a question about it, or book the audit. The middle one is the target.

Ask a question about it opens a bounded conversation. It can discuss the result, the recommended items, what is involved, how long it takes, and what a build like

that costs. It cannot quote, commit to dates, or negotiate. When it reaches that edge it says so plainly and offers the call. Every transcript comes to us.

For the sales process this does four things. It qualifies before an hour is spent. It pre-frames the audit as the obvious next step. It hands over a transcript of the prospect's actual worries before anyone speaks to them. And it lets the ones who are not ready stay in contact without either side pretending otherwise.

06 MODEL AND PRICING

01 — THE AUDIT

\$1,500 fixed, published, includes an initial tool. Roughly covers its own delivery cost. Its job is to convert, not to earn.

02 — BUILDS

Quoted on hours with indicative ranges published. The profit centre. Small engagements \$2,500–\$4,000. Typical builds \$6,000–\$15,000. Integration and software work above that.

03 — KEYSTROKE SAVERS

Monthly. The compounding line, and the one that eventually makes the firm worth something rather than just profitable.

RATE

Effective delivery rate \$150–\$180 an hour. Blended \$165 for planning. Above offshore and fixed-price freelancers, well below the consultancies we are priced against. Quoted in hours, presented as a fixed total.

07 COST BASE

Genuinely light, which is the structural advantage of this business. No premises, no staff, no stock.

FIXED OVERHEAD

LINE	MONTHLY	ANNUAL
Microsoft 365 Business Premium ×2	\$50	\$600
Power BI Pro ×2	\$40	\$480
Adobe Creative Cloud	\$90	\$1,080
Model APIs and subscriptions	\$250	\$3,000
Hosting, domains, Cloudflare	\$40	\$480
Accounting software	\$70	\$840
Professional indemnity and public liability	\$180	\$2,160
Accountant, ASIC, sundries	\$120	\$1,440
Fixed subtotal	\$840	\$10,080

ONE-OFF AND VARIABLE, YEAR ONE

LINE	AMOUNT	NOTE
Company registration and ASIC	\$600	One-off
Domains, trade mark search and filing	\$1,000–\$2,500	Do before anything is printed
Marketing	\$5,000	Conservative end of the \$2,000–\$25,000 ceiling
Agent API spend	\$2,500	Scales with client count. Budget 8–12% of retainer revenue
Brand and website build	\$0	Internal. Time, not cash
Total year one costs	\$20,000	Approximate, including fixed overhead

Cash required before revenue lands between \$5,000 and \$12,000 against a stated ceiling of \$25,000. That leaves genuine runway rather than spending it all on launch, which is the point.

Agent API cost belongs in cost of delivery, not overhead. It scales with client count rather than with our effort, which is the mechanism that makes the retainer margin work as the book grows.

08 CAPACITY

80

HOURS A WEEK, COMBINED

44

BILLABLE HOURS A WEEK AT 55%

\$31,000

MONTHLY CEILING AT \$165

\$375,000

ANNUAL CEILING

Fifty-five per cent billable accounts for sales, admin, marketing and the crew's own maintenance. The annual ceiling of \$375,000 is the number the whole plan runs into. Year one does not approach it and should not try.

THE REAL CONSTRAINT IS INTERRUPT LOAD, NOT HOURS

Retainers with a one business day response fragment the week and destroy build productivity. Ten retainer clients at ten hours each consumes 100 hours a month before a single build starts. That is half of capacity, at the lowest margin in the business.

No client cap is published. In place of one, the plan carries a trigger: at eight retainer clients, stop selling retainers until either prices rise or the crew is carrying the monitoring load. At the year one volume below, eight clients is not reached, so this is a year two condition.

\$75,000 of revenue is roughly 455 billable hours across the year, or about nine hours a week between two people, against the forty-four available. Year one is therefore an asset-building year: the site, the crew, the case catalogue, and the counting ledger. The plan should be read as a floor that protects against a slow start, not as a forecast of what two full-time people can deliver.

09 FIRST 90 DAYS

DAYS 1–30

BUILD THE THING THAT SELLS

- Register the company. Check the domain and search IP Australia in classes 35 and 42 before anything is printed.
- Choose the logotype direction. Delete the other two.
- Build the site with eight to twelve cases from work already owned.
- Stand up five agents doing real work. The roster page cannot launch without them.
- Write the audit method: what gets counted, how, and what the report looks like.
- Open the counting ledger. No figure goes anywhere until it has a row.
- Professional indemnity and public liability in force. Terms of engagement drafted by a lawyer, with a limitation of liability clause.

REVENUE TARGET: \$0

DAYS 31–60

FIRST PAID WORK

- Launch the site and the quiz.
- Work the warm list. Offer the audit at full price to everyone on it.
- Do not discount the front door. Discounting it undermines the only thing the pricing page is for.
- Start weekly outreach at a fixed volume, tracked.

TARGET: 2 AUDITS, \$3,000

DAYS 61–90

FIRST BUILD, FIRST CASE

- Deliver the first build and turn it into a case the same week.
- Publish the first ledger-traced figure on the site.
- LinkedIn running: the counting method, real figures, anonymised before and after.

TARGET: \$7,000 CUMULATIVE

IF NOTHING IS INVOICED BY DAY 90

THE DIAGNOSIS IS DISTRIBUTION

Not the offer, not the price, and not the website. The response is direct outreach at volume, not another month of building. Building the site is not marketing, and the two get confused in exactly this situation.

10 FIRST 12 MONTHS

YEAR ONE, BY QUARTER

QUARTER	AUDITS	BUILDS	RETAINERS HELD	REVENUE
Q1	2	1	0	\$7,000
Q2	3	2	2	\$15,000
Q3	4	2	4	\$22,000
Q4	4	3	5	\$31,000
Year one	13	8	5	\$75,000

\$75,000

REVENUE

\$20,000

COSTS

\$55,000

PROFIT BEFORE TAX

\$27,500

EACH, BEFORE TAX

Exit run rate sits at \$10,000 to \$11,000 a month, with \$7,500 of it recurring across five Keystroke Savers clients. That recurring figure matters more than the headline total, because it is the floor year two starts from.

Thirteen audits across the year is a little over one buyer a month. That is a small number, which is the good news, and it is still thirteen people who have to decide to spend \$1,500. One a month is the entire marketing plan and it is worth stating that simply.

Year two, on the same capacity with corrected retainer pricing, sits at \$300,000 to \$375,000. That is the ceiling. Past it the firm either hires, sells something it owns rather than its hours, or stops growing. Worth knowing now, because it shapes what gets built this year.

PERSONAL RUNWAY – A DECISION TO MAKE ON PURPOSE

\$27,500 each before tax is below a living wage. Both principals are available full time with no other income. Twelve months at this level requires either personal savings that cover the gap, or an explicit acceptance that year one is an investment year funded from outside the business. It is an ordinary first year for a services firm launching cold. It should be a decision made in month one rather than a discovery made in month seven.

11 RISKS

Ranked by what would actually hurt, not by likelihood.

#	RISK	RESPONSE
1	Distribution. A strong offer and no proven way to put it in front of strangers. Everything downstream assumes leads arrive.	Warm list is the whole of month two. Fixed weekly outreach volume, tracked. Do not confuse building the site with marketing.
2	Support eating delivery. One business day response, no cap, two people.	The eight-client trigger. Crew-carried monitoring. Support scoped to what we built. General IT support sold only as an add-on to an existing retainer.
3	Concentration. With five clients, losing one is a 20% revenue event.	No client above 30% of revenue by month nine.
4	Both principals are delivery. Neither is full-time sales, so delivery weeks become sales-free weeks and revenue saws.	One principal owns pipeline every week regardless of workload. This is the most common failure mode for two-person firms.
5	The name. Keystroke is a real English word. A conflict in class 42 found after launch costs the site, the stationery and the domain equity.	Search IP Australia classes 35 and 42 this week, before the logotype is finalised.
6	The crew degrading. The best differentiator, and a liability the moment it stops running.	Treat it as a product with maintenance hours, not a marketing page. Budgeted, not assumed.
7	Scope on the audit. It is easy to spend twenty hours counting for \$1,500.	One process, defined in writing, capped at a stated number of hours.
8	Professional liability. We build financial reporting clients make decisions on.	PI cover in force before the first invoice. Limitation of liability drafted by a lawyer, not a template.
9	The crew page misread as staff. Any drift toward human names or photorealistic faces is misleading conduct and ends the trust position.	Not a person. in every card at field weight. No portraits, no human names, no pronoun other than it.

12 DECISION RECORD

Settled. Not to be relitigated without a reason that has changed.

1. The firm is **Keystroke**. Two principals, Kieran and Tyler. Separate venture, no parent.
2. Line: **Let us push the buttons for you.**
3. The counter is the brand. Figures trace to a published ledger or they do not appear.
4. Palette is **Instrument**. Dark is theme one; light exists for documents and print.
5. The crew is software agents, openly agents, carrying **Not a person**. No invented staff, no photorealistic faces, ever.
6. Market: Australian businesses of 5–50 staff. Buyer holds authority. Australia first, overseas later.
7. Four practices: Count, Clear, Build, Face.
8. Front door is the **Keystroke Audit**, \$1,500 fixed, includes an initial tool.
9. Builds quoted on hours. Indicative ranges published.
10. Retainer is **Keystroke Savers**. One business day response on every tier. No published client cap.
11. No service category refused. IT support and social media management are in scope, sold as scheduled work rather than an always-on obligation.
12. The unit of content on the site is a **case**, described not named, with before and after counts and a cost range.
13. The quiz diagnoses and recommends. It does not price custom work. Its primary target is the bounded conversation, which hands off to a call.
14. Year one revenue floor is **\$75,000**, read as a floor and not a forecast.
15. Australian English, AUD, Australian market context.

13 OPEN ITEMS

OUTSTANDING, WITH THE DECISION THAT UNBLOCKS EACH

ITEM	BLOCKS	OWNER
Trade mark search, IP Australia classes 35 and 42	Logotype finalisation, stationery, domain purchase	Kieran
Logotype direction: Tally, Drum or Keycap	Every surface. Two get deleted	Tyler
Practice names: Count / Clear / Build / Face, or plain descriptors	Site navigation, practice pages	Both
Run and Own tier hours. Set at 20 and 35 here, following the \$150 metric	Pricing page	Both
Watch tier margin: hold \$1,500 as foundation pricing, or reprice now	Pricing page, year two model	Kieran
Personal runway for twelve months at \$27,500 each	Whether this plan is viable as written	Both
Type licences: Knockout and Söhne	Nothing. Open fallbacks render correctly	Tyler
Photography shoot. Drawn keycap stand-in in use and labelled	Hero and case artefacts at full quality	Tyler
Product list with names and published prices	The quiz interpreter, which recommends only from it	Both
Launch date	The 90-day plan, which is written in relative days	Both

No live status marks appear in this document because nothing is running yet. The first one belongs on the crew page, not here.
